Test conditions:

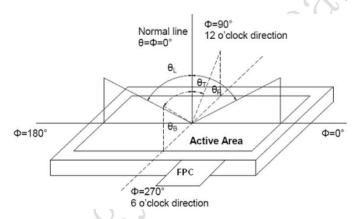

IF= 40 mA, and the ambient temperature is $25\,^{\circ}$ C.

Note 1: Definition of optical measurement system.

The optical characteristics should be measured in dark room. After 5 minutes operation, the optical properties are measured at the center point of LCD.

Note 2: Definition of viewing angle range and measurement system. The viewing angle is measured at the center point of the LCD by BM-7A.

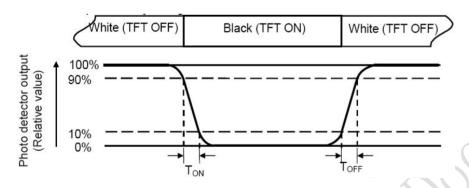

Note 3: Definition of color temperature.

When the radiation of the light source is exactly the same in the visible region and the absolute blackbody, the temperature of the blackbody is called the color temperature of the light source. Color temperature is an index to measure the degree of light source color (cold color, warm color). Warm color < 3300K, intermediate color $3300 \sim 5000$ K, cold color > 5000K.

DWIN Technology 12 www.dwin-global.com

Note 4: Definition of response time.

The response time is defined as the LCD optical switching time interval between "White" state and "Black" state. Time ON (TON) is the time between photo detector output intensity changed from 90% to 10%. And time off (TOFF) is the time between photo detector output intensity changed from 10% to 90%.

Note 5: Definition of color chromaticity (CIE1931). Color coordinates measured at center point of LCD.

Note 6: Definition of luminance. Measure the luminance of white state at center point.

9 Appearance Inspection

9.1 General rules for inspection

- 9.1.1 Anti-static wearables (anti-static wristbands, gloves) must be worn during the inspection.
- 9.1.2 Do not use bare hands to touch the position of the device, golden fingers, and the surface of the screen to prevent the sweat from human hands from causing oxidation and affecting the appearance.
- 9.1.3 It is forbidden to stack products out of specification and handle them with care to avoid damage to components.
- 9.1.4 The repaired products need to be inspected to prevent rosin and tin slag from exceeding the specifications.
- 9.1.5 When technical documents and process documents have specific requirements for products, the technical documents and process documents shall be the main requirements.

9.2 Inspection conditions

9.2.1 The conditions of display function check

Angle: ±5°;

Inspection method: visual inspection. The inspection object is 30-40cm away from the light source, and the eye is 30-40cm away from the inspection object;

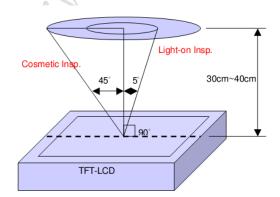

Illumination: 300-500Lux; Inspection time: 5-10S.

9.2.2 Visual inspection conditions

Angle: ±45°;

Inspection method: visual inspection. The inspection object is 30-40cm away from the light source, and the eye is 30-40cm away from the inspection object;

Illumination: 800-1500Lux; Inspection time: 5-10S.

9.3 Inspection standards

Туре	Test Items	Judgement Standard		
	Dead pixels	No dead pixels		
Display state	mura	From different angles, the brightness is required to be uniform. Under the 64-level grayscale or pure black interface, there should be no uneven display brightness within the viewing angle range of 45° through 6% ND FILTER. Y series (TV film) LCD screen does not have specific requirements, and the picture inspection does not affect the display as qualified.	Slight defect	
		Uneven brightness Black and white mottled		
	Light leakage	Under the 64-level grayscale or pure black interface, there should be no obvious light leakage within the viewing angle range of 45° by visual inspection or through 6% ND FILTER. Y series (TV LCD screen) series can be without obvious visual defects.	Slight defect	
	Linear foreign bodies	 1. W≤0.05, L≤2mm, negligible; 2. 0.05mm < W≤0.1mm, L≤2mm, N≤3; 3. W>0.1mm, L>2mm, not allowed. 	Slight defect	
Screen surface	Within the effective area	Spotted: 1. D≤0.2mm and it is not a piece, it is not counted; 2. 0.2mm <d≤0.5mm, 3.="" d="" n≤3;="">0.5mm, L>0.5mm, W>0.5mm are not allowed; (The spotted foreign objects shall not exceed the point-line gauge D=0.5, and the black dot coverage shall be checked, and the spotted foreign objects shall be judged within the range of D=0.5)</d≤0.5mm,>

10 Precautions for Use of LCD Modules

- 10.1 Handling Precautions
- 10.1.1 The display panel is made of glass. Do not subject it to a mechanical shock by dropping it from a high place, etc.
- 10.1.2 If the display panel is damaged and the liquid crystal substance inside it leaks out, be sure not to get any in your mouth, if the substance comes into contact with your skin or clothes, promptly wash it off using soap and water.
- 10.1.3 Do not apply excessive force to the display surface or the adjoining areas since this may cause the color tone to vary.
- 10.1.4 The polarizer covering the display surface of the LCD module is soft and easily scratched. Handle this polarizer carefully.
- 10.1.5 If the display surface is contaminated, breathe on the surface and gently wipe it with a soft dry cloth. If still not completely clear, Can only use LCD dedicated cleaner, the following organic solvent can not be used:
 - Isopropyl alcohol
 - Ethyl alcohol
 - Ketone
 - Aromatic solvents
 - 10.1.6 Do not attempt to disassemble the LCD Module.
 - 10.1.7 If the logic circuit power is off, do not apply the input signals.
 - 10.1.8 To prevent destruction of the elements by static electricity, be careful to maintain an
 - 10.1.9 optimum work environment.
 - 10.1.9.1 Be sure to ground the body when handling the LCD Modules.
 - 10.1.9.2 Tools required for assembly, such as soldering irons, must be properly ground.
- 10.1.9.3 To reduce the amount of static electricity generated, do not conduct assembly and other work under dry conditions.
- 10.1.9.4 The LCD Module is coated with a film to protect the display surface. Be care when peeling off this protective film since static electricity may be generated.
- 10.2 Storage precautions
- 10.2.1 When storing the LCD modules, avoid exposure to direct sunlight or to the light of fluorescent lamps.
- 10.2.2 The LCD modules should be stored under the storage temperature range. If the LCD modules will be stored for a long time, the recommend condition is:
- Temperature: 0°C ~ 40°C Relatively humidity: ≤80%.
- 10.2.3 The LCD modules should be stored in the room without acid, alkali and harmful gas. 10.3 Transportation Precautions
- 10.3.1 The LCD modules should be no falling and violent shocking during transportation, and also should avoid excessive press, water, damp and sunshine.

DWIN Technology 19 www.dwin-global.com

11 LCD Introduction

11.1 Process capacity

DWIN adopts original class A glass and the entire production is in the park from cleaning, cutting, bonding, and laminating of large glass to backlight assembly, quality inspection, and aging.

There are 12,000 square meters of clean workshop, with a monthly production capacity of about 2.5 million pieces. Each piece of LCD produced in the factory is for 30 days of aging.

11.2 ODM service

Based on LCD products of 1.5~21.5 inches, DWIN provides the following customization services.

1. LCD HDMI interface customization.

2. Special screen customization such as high brightness, ultra-wide temperature and strong electromagnetic protection.

High luminance (up to 1200nit)

Ultra-wide temperature (-40~85°C)

Strong electromagnetic protection

3. Lamination customization service of LCD + TP.

LCM+CTP

4. Customization service of DWIN self-developed T5L ASIC+ LCD + TP.

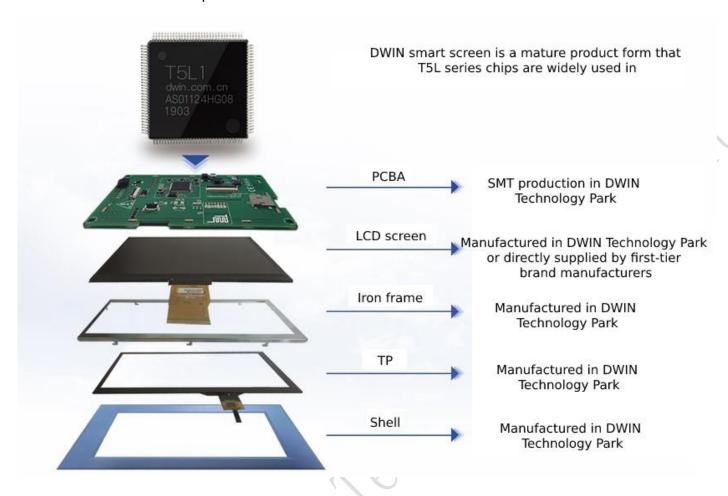

5. Smart screen finished product customization.

Please contact our sales staff for other customization needs.

Record of Revision

Rev	Date	Description	Editor
00	2022-12-05	First Release	Ouyang Kaixing
01	2023-01-11	Add Product Picture	Chen Xian
02	2023-02-22	Update Packing Capacity and Driver IC	Chen Xian
